★★★★★ Great project speaker

Sunday, May 16, 2010

Shaun B. from Macon, GA

I just built a small line-array using 8 of these stacked vertically mounted in a 5x5 vinyl fencepost and I must say it sounds great. I really don't feel a need for a tweeter and the lows are surprising...but will still benefit from a subwoofer. Ordering more to make stereo pair soon.

★★★★★ Great sound; wide frequency response

Sunday, May 9, 2010

www.gtrr.com from KCMO

Built two line array cabs; 8 speakers each. These are to replace a pair of JBL SF15 2way speakers. BLOWS AWAY THE JBL's. Articulate, GREAT bass response (cabs tuned to 55hz). There is a "presence" with line arrays that is just not there with the typical front load horn/woofer combo.

★★★★★ Good value if you've got extra time

Sunday, October 18, 2009

Adam from Chantilly

I found it difficult to mount these drivers in a test baffle for break in. I ended up wiring several and leaving them on a desk to run for several days. I also received several DOA units. Make sure you order extras if you go this route.

Dayton HR13C22 High-Speed
HDMI Cable V1.3 C2 CL3 2m

They do go much lower than the 2" aluminum fullranges available here. They also have a pretty flat response and model well with very low Vb. They may make decent computer speakers with a short array and a T amp.
